

Building the UK's first network of hydrogen refuelling stations

Element 2, the UK's leading hydrogen refueller. We are:

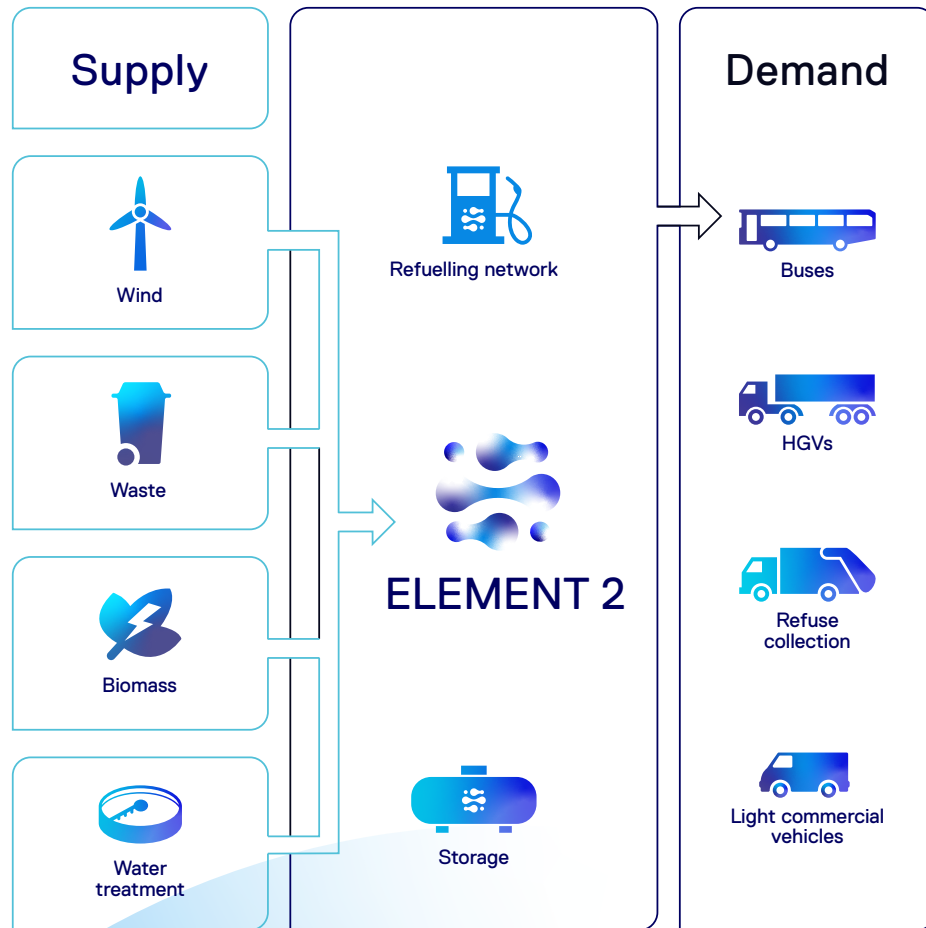

Building the first national network of hydrogen refuelling stations across the UK and Ireland, using green hydrogen from local and national producers.

A site developer, distributor, operator, and refueller - not a technology owner or hydrogen producer.

Working towards displacing half a million tonnes of CO₂ each year by 2026.

Making hydrogen easy for you

Making the UK a global decarbonisation success story

Whether you're a large or small hydrogen supplier, or a vehicle manufacturer, we can provide a turn-key route to moving quickly on your hydrogen strategy, with minimal outlay, allowing you time and flexibility.

Working with suppliers

We're a keen off-taker of hydrogen from a wide variety of sources - and almost certainly yours. Our UK-wide network of safe, high-quality hydrogen refuelling stations will cover the entire country by 2027, breaking the chicken and egg infrastructure dilemma. We'll ensure your production always has a market.

Working with customers

We use our team's vast expertise - over 20 years' experience in fuel cells, hydrogen and chemicals, emerging technologies, the road transport market and engineering - to find the best solution for you. We're technology agnostic, so can select and deploy the best and safest technologies as they develop. We aim to be the first to implement the best.

Safety is at our core

We can help with assessments for on-site hydrogen refuelling - mobile or permanent. All our engineers go through rigorous safety training so you don't have to worry. We pride ourselves on ensuring everything we do is driven by the highest safety standards.

Andrew Hagan

Advisory board
Sir Vince Cable

"We're so proud of our collaboration with Element 2, as both organisations are working towards the same goal: the decarbonisation of our roads. The combination of Element 2's hydrogen refuelling infrastructure coupled with our state-of-the-art hydrogen buses means that, together, we can forge a pathway towards net zero in the coming years."

Tony Tomsett,
Business Development Director,
Caetano UK

"HITRANS were delighted with Element 2's work during COP26 to deploy a mobile refueller in Inverness and Oban, providing hydrogen for a Caetano bus. Element 2 worked to a very tight schedule with Stagecoach and West Coast Motors to create a secure site for mobile refuelling. This was a UK first, and a significant achievement for the area when the eyes of the world were on Scotland."

Frank Roach,
Partnership Manager, HITRANS
